

AI Adoption Tailwinds

Consumers Captivated, OpenAI & Anthropic Eye the 'EnterPRIZE'

Two questions have dominated our conversations with investors in recent months: how is AI adoption evolving, and who is winning share in consumer and enterprise markets. In this note, we shed light on market adoption dynamics and the impact for private AI companies within our coverage, leveraging our proprietary survey of >2,500 U.S. consumers and insights from a diverse set of channel checks.

Consumer adoption insights:

- **AI adoption among U.S. consumers reaching an inflection point.** Our proprietary survey indicates that ~60% of adults who have heard of AI are now actively using AI services, with ~70% of users adopting AI in the last year.
- **Information search remains dominant use case, commercial intent rising.** ~74% of respondents use AI services for info search, while accuracy and data privacy are bottlenecks to adoption. ~43% of users have made purchasing decisions using AI and ~9% are using AI chatbots to complete transactions.
- **Adoption skews young and wealthy, with AI use becoming habitual.** 18-24 year olds and those with household income >\$150k biggest AI user cohorts in survey (74%/76% use AI); ~48% of AI adopters use AI daily, ~39% weekly.
- **ChatGPT still chatbot of choice.** ~52% of our survey respondents rank ChatGPT as their favorite AI service. Third-party data puts its share at ~60% of global mobile app downloads since Oct-22, but Google and others have gradually eroded share (Gemini favorite for ~22%, download share ~20%).
- **Initial consumer receptivity to advertising appears favorable.** Only 15% of users in our survey suggested they would churn if ads introduced, with 41% of respondents indicating that they would favor a free ad-supported model.

Enterprise adoption insights:

- **AI adoption surging across U.S. businesses.** Recent third-party data cites companies with paid AI subscriptions grew to ~47% in Jan-26 (~26% twelve months ago). Over the next year, avg. AI contract value projected to rise 1.9x (Ramp), and ~90% of orgs expecting to spend more on AI (Wharton, Oct-25).
- **Pent-up employee demand for broader AI deployment.** ~53% of computer-based workers in our survey receive employer-provided AI services, and of those who do not, ~38% are using personal AI services at work.
- **Improved model capabilities driving adoption and use.** User preference ranking data shows Google's Gemini held the top spot overall (or tied #1) from July 2025 until this month, when Anthropic's Claude Opus 4.6 surpassed it.
- **Agentic tools gaining traction beyond coding.** Claude Cowork and viral tools like Openclaw are broadening agentic reach and raising SaaS disruption potential, but security and tech fragmentation factors still hinder adoption.
- **Bolstering top-line of leading modelmakers.** Anthropic: ~\$14bn ARR (Feb-26, 80% enterprise); OpenAI: \$20bn ARR (Dec-25, 40%, previously 30%).

See page 11 for analyst certification and important disclosures.

J.P. Morgan does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

AI Consumer Adoption

AI adoption among U.S. consumers reaching an inflection point. Last month, we conducted an AI survey of over 2,500 U.S. consumers, with a diverse set of respondents that align roughly with the U.S. population (the survey skews towards lower income and less educational attainment vs. the general population, for more see Survey Demographics). The results of our survey show that **~59% of U.S. consumer respondents who had heard of AI are using it** (n=2,524), with **>70% of these users trying AI chatbots for the first time in the past 12 months** (~14% in the last month).

Information search is the dominant use case, with writing assistance and work productivity the second and third most cited use cases. Interestingly, nearly 25% of users suggested that “chatting or conversation” was also a primary use case.

Figure 1: Searching for Information The Dominant Use Case

What are the Primary ways you use AI services (e.g., ChatGPT, Gemini)?

Source: SurveyMonkey (n=1,490), J.P. Morgan

When asked what they were using AI information search for, **nearly half of our survey respondents listed searching for product information**, notably higher than the ~2% product-related queries NBER/OpenAI reported finding in their Sep-25 study. We suspect this difference may be driven by the geographic focus of our survey (U.S. only) and subsequent release of features enabling consumer shopping (e.g., OpenAI Shopping Research released Nov-25). Around 43% of AI information search users suggested it had replaced Google.

Figure 2: ~43% Using AI Services for Information Search

What do you search for on AI services (e.g., ChatGPT, Gemini)?

Source: SurveyMonkey (Multi-select, n=1,097), J.P. Morgan

Of the ~41% of U.S. adults who had heard of AI but were not using it (n=1,034), ~34% reported trying AI services before. The consumers who churned suggested **accuracy and data privacy were the primary reasons they stopped using AI services**. Other notable reasons included “*environmental impact*”, “*don’t trust it*”, “*too complicated*”, “*ethical concerns*”, and “*too much info on you*”.

Figure 3: Accuracy & Data Privacy Biggest Bottlenecks to Use

Why did you stop using AI services (e.g., ChatGPT, Gemini)? (Former AI users)

Source: SurveyMonkey (Multi-select, n=350), J.P. Morgan

While we expect the accuracy and quality of consumer-AI interactions will continue improving and freemium models (e.g., ads) to reduce the cost to end consumers over time, **data privacy and information sharing concerns may remain a headwind to broader AI adoption**. For current users of AI services, similar preferences emerged, with improved accuracy/quality the number one driver of an improved AI experience. **Notably, nearly a quarter of current users were happy with their current experience.**

Figure 4: Improved Accuracy, Speed & Personalization Top Requests

What would most improve your experience with AI services? (Current AI users)

Source: SurveyMonkey (Multi-select, n=1,490), J.P. Morgan

Growing signals of commercial intent. With OpenAI’s release of Instant Checkout in Sep-25 (see our note [here](#)) and initial testing of ads in Jan-26 (see our note [here](#)), **investors are increasingly focused on the consumer monetization opportunity**. Data [released](#) by OpenAI in Sep-25 suggested that ~2% of ChatGPT queries were product related (~50 million per day at the time). While our proprietary consumer survey suggests that Google remains the core source of information before making a purchase—34% cited Google

Search as their primary information source over the past 3 months—**ChatGPT was the most used AI chatbot at 8.4%** (Gemini 3.6%, Perplexity 0.4%, Claude 0.2%, Grok 0.2%).

Of survey respondents using AI services (1,490 individuals) **nearly 43% had made a purchasing decision** in the past 3 months based on recommendations from ChatGPT, Gemini, or other AI applications. Purchases ranged from “*Smart TVs*” to “*Skincare*” to “*Hotel Rooms*” to “*Skiing tickets*”, with ~62% of spend between \$26-100 and over 20% exceeding \$100, suggesting more robust adoption than earlier data indicates. Around 9% of respondents noted making a direct AI-chatbot based purchase in the past 3 months.

Figure 5: AI-Chatbot Facilitated Purchases ~9%

In the last 3 months, which platforms have you used to purchase an item?

Source: SurveyMonkey (Multi-select, n=2,524), J.P. Morgan

Adoption skews young and wealthy. The largest factors influencing AI adoption in our U.S. survey appear to be age and income, with limited differences found in the adoption rate by men or women. In particular, **younger and wealthier individuals appear more likely to use AI services.** The former explains the rapid adoption and growth in markets like India—which we flagged as a core battleground for consumer market share in our [initiation](#) note on OpenAI last July.

Figure 6: AI Usage Skewed Toward Younger...

Do you use AI services? (By Age).

Source: SurveyMonkey (n=2,517, individuals who had heard of AI services), J.P. Morgan

Figure 7: ... and Wealthier Consumers

Do you use AI services? (By Annual Household Income).

Source: SurveyMonkey (n=2,463, individuals who had heard of AI services), J.P. Morgan

Survey suggests AI use is becoming habitual: ~48% of respondents (n=1,490) reported using AI-based services daily, ~39% weekly, and ~6% less than monthly. **Paid adoption also appears elevated:** ~27% of AI users cited paying for an AI service, notably higher than OpenAI’s ~5-6% paid conversion rate in Q4 2024. This difference could be due to the nature of our survey sample (U.S. only, potential skew in cohort willing to complete an AI survey). Additionally, ~49% of paying respondents paid ~\$16-30, suggesting most use just one standard Pro/Plus service (~22% pay <\$15, indicating subscriptions like ChatGPT Go/Google AI Plus may be well-suited to consumer behavior—both recently launched in the U.S.). For respondents using **free AI services** (n=1,093), **over 54% suggested they didn’t use it often enough to justify the cost of a subscription**, while ~27% noted that they didn’t see enough of a difference between free and paid versions.

ChatGPT still chatbot of choice, but share has eroded.

Over half of U.S. consumers in our survey indicated that their **favorite AI service is OpenAI’s ChatGPT (52%)** followed by Google’s Gemini (22%).

Figure 8: ChatGPT the Consumer ‘Favorite’...

What is your favorite AI service? (Current AI users)

Source: SurveyMonkey (n=1,490), J.P. Morgan

This roughly aligns with third-party cumulative global mobile app download share data (ChatGPT share ~60%, Gemini ~20% since Oct 2022).

Figure 9: ...But Mobile App Download Data Shows 18% Share Loss YoY

Source: Sensor Tower (cumulative relative share from 10/2022), J.P. Morgan

As highlighted in our November 2025 [initiation](#) of xAI, **Google Gemini's relative download share accelerated into Q4** off the back of the company's updated image model—"Nano Banana"—and back-to-school adoption aided by free Google AI subscriptions for students (note Google is covered by J.P. Morgan U.S. Internet Analyst Doug Anmuth). Third-party data from Sensor Tower suggests that this trend has somewhat faded, contrary to website visit data from Similarweb, which points to Gemini continuing to gain share.

Figure 10: App Downloads Suggest ChatGPT's Q4 Attrition Fading...

Source: Sensor Tower, J.P. Morgan

Figure 11: ...But Website Visit Data Points to Continued Attrition

Source: Similarweb, J.P. Morgan

This bifurcation could be driven by the platform used to access AI services—our survey suggests **~82% of AI users use mobile phones and ~56% use computers** (only ~5% use AI dedicated hardware like Meta glasses). OpenAI's continued dominance in the consumer market remains a key component underpinning the company's projected revenue growth, so investors are closely monitoring share evolution dynamics given the company's ~\$1.4tn capex commitments.

Initial consumer receptivity to advertising favorable. Of those who use AI, **nearly 15% said they would stop using AI services if ads were incorporated.** However, ~41% said they would prefer a free AI service with advertisements vs. ~25% who said they would prefer to pay a subscription fee for access without ads. This broadly aligns with our expectations that thoughtful advertising is not likely to drive material churn across AI chatbots—we will, however, closely monitor the success of ChatGPT in the coming months as the first large-scale AI chatbot product provider to test ads.

Figure 12: Majority of Consumers Would Prefer Ad Based Model

Which would you prefer when using AI services (e.g., ChatGPT, Gemini)? (Current AI users)

Source: SurveyMonkey (Multi-select, n=1,490), J.P. Morgan

Enterprise Adoption

AI adoption surging across U.S. businesses. Ramp data shows **~47% of U.S. businesses now pay for AI services** (Jan-26), up from ~26% twelve months ago. Our channel checks corroborate this momentum: enterprises are shifting from experimentation toward scaled deployments, particularly for general-purpose LLMs (GPT, Claude, Gemini). Spending is also rising: Ramp expects **average AI contract values to rise 1.9x this year**, and an October Wharton survey found that 88% of organizations plan to raise Gen AI budgets over the next 12 months.

Figure 13: AI Adoption Rising Across U.S. Enterprises

Share of U.S. businesses with paid subscriptions to AI models, platforms, and tools

Figure 15: Large Enterprises Lead in Scaling AI Beyond Pilots

Phase of organization's use of AI, by company revenue, % of respondents

Note: Respondents who said "don't know" are not shown but represent <2% of the total.
Source: McKinsey Global Survey on the State of AI, 1,993 participants at all levels of the organization, June 25-July 29, 2025

Pent-up employee demand for broader AI deployment.

Among **computer-based workers** in our proprietary survey, **53% receive employer-provided AI services** (n=906), suggesting adoption has accelerated but still has significant runway. Across all employed respondents (n=1,439), 39% reported access to workplace AI tools—albeit our survey respondents were notably skewed toward lower income and education levels (7% report household income above \$150k vs. 26% in 2024 U.S. Census). Given the documented correlation between income and AI adoption, particularly in higher-income domains like software development, **our findings likely understate enterprise use**, especially for developer-focused tools such as Claude Code.

ChatGPT (~56%), Gemini (~40%), and Copilot (~36%) dominate workplace deployment for employed survey respondents with employer-provided AI services. We expect Claude's relatively modest share could also reflect our survey income skew, given Claude's strength in software engineering and other high-income professional domains.

Figure 16: ChatGPT, Gemini, and Copilot Lead Enterprise

If employer provided AI services, "What AI does your employer provide?"

Source: SurveyMonkey (Multi-select, n=602), J.P. Morgan

For individuals without employer-provided AI services, **nearly a quarter used their own personal AI tools at work** and nearly 50% suggested AI was not relevant to their job.

Figure 17: ~25% Without Employer-Provided AI Use Personal AI Tools

If no employer provided AI services, "What characterizes your AI usage at work?"

Source: SurveyMonkey (n=893), J.P. Morgan

The perception of AI tools in the workplace appears mixed but broadly positive, with **over 39%** of employed respondents **suggesting AI was making them more efficient at work**. Despite headlines about AI-driven job losses, fewer than **10% of employed respondents** expressed concern about their job security because of AI.

Figure 18: Perceived Impact of AI on Work Broadly Positive

For those who are employed, "How is AI currently impacting your work?"

Source: SurveyMonkey (Multi-select, n=1,439), J.P. Morgan

Improved model capabilities driving adoption and use.

Enterprises **increasingly access AI models through cloud providers**, where switching costs are low and multiple performant options available. Model capability remains critical, with enterprises weighing intelligence, reliability, cost, speed, and safety in provider selection. Our enterprise channel checks support this dynamic: Gemini 3's launch, for example, has prompted some organizations to consider adopting GCP specifically to access Google's models.

User preference rankings likely offer the clearest signal of competitor positioning. With technical benchmarks saturating at the frontier, we view user preference rankings as a more useful measure of real-world model capability. On LM Arena, Anthropic's latest release Opus 4.6 took the #1 spot in Feb-26, with Google having held the #1 position (or tied #1) since Jul-25. Notably, OpenAI has slipped following GPT-5's release, now trailing Google, xAI, and Anthropic in user preference—though we anticipate new model releases from any provider could quickly shift these dynamics.

While consumer adoption can be catalyzed by viral moments, such as OpenAI's "Ghibli" image generation or Google's Nano-Banana release, **enterprise adoption typically is driven by a combination of top-down and bottoms-up factors**. AI use has become a top down mandate in many organizations (e.g., Coinbase) while simultaneously developers and knowledge workers are championing preferred tools to managers and tech leads.

Figure 19: Anthropic Displaces Google's Reign at #1

Overall Text User Preference Ranking

Source: LM Arena (models may have had different rankings during interim dates), J.P. Morgan

Agentic tools gaining traction beyond coding. Our enterprise channel checks suggest Claude Code continues to win share from AI-coding platforms like Cursor and Windsurf and disrupt the overall software development lifecycle. In our [initiation](#) on Anysphere (maker of Cursor) and Cognition AI (owner of Windsurf), we noted agentic capabilities put existing workflows, interfaces, and use cases at risk as end-to-end agents are increasingly capable of complex tasks. Our **expectation is that larger generalist providers may be better positioned to compete in an agentic-first future given the impact of scaling laws on intelligence** (underlying model performance serves as a baseline for agent capabilities). As use cases have proven out, revenue associated with agentic coding tools has exploded—Claude Code eclipsed \$2.5bn ARR in Feb-26.

Figure 20: Coding Tools ARR

USD in millions

Source: Company website, The Information, J.P. Morgan

Latest agentic releases spark software sell-off. The release of Claude Cowork in early January and viral tools like Openclaw (formerly Clawdbot, Moltbot) have thrust agents into the center of investor debates about the potential for SaaS disruption and been attributed to a sharp selloff in publicly traded software companies. A recent note by JPMorgan's Global Markets Strategy team headed by Dubravko Lakus-Bujas [highlights](#) that, *"software has undergone the largest*

non-recessionary 12M drawdown in over 30 years (~34%), wiping out ~\$2T of market-cap from the peak and reducing its weight in the S&P 500 from 12.0% to 8.4%.” These generalist AI agents rely heavily on coding capabilities alongside additional context and skills to complete complex tasks, fueling a narrative that AI could materially disrupt traditional enterprise SaaS players earlier and more deeply than previously imagined.

However, we suspect the **path to full-scale enterprise adoption of agentic tools and potential displacement of entrenched SaaS enterprise players, may take longer and be less binary than current market sentiment suggests.** J.P. Morgan Head of U.S. Enterprise Software Mark Murphy noted in a recent [note](#): “*It feels like an illogical leap to extrapolate Claude Cowork Plugins, or any similar personal productivity tools, to an expectation that every company will hereby write and maintain a bespoke product to replace every layer of mission-critical enterprise software they have ever deployed.*” We agree. While agentic capabilities (and the underlying models) are impressive and improving, replacing entrenched SaaS platforms could take years, particularly those with longer sales cycles, integration across enterprise tech infrastructure, and ownership of systems of record. For software companies, a divide appears to be emerging between platforms that continue to monetize through seat-based pricing (exposed to AI-driven headcount reductions) and data-centric platforms with usage-based pricing that may benefit from agent-driven consumption, as autonomous agents become ‘customers’ accessing and acting on data.

For enterprise adoption, the constraints seem less about AI model and agentic capabilities and **more about deployment readiness and integration complexity**, particularly in light of the elevated safety risks involved when deploying agents, all of which will likely impact the rate and extent of adoption.

Model makers are responding to the challenge. Anthropic launched [Claude Cowork](#) on Jan 12, 2026 as a research preview. The tool brings Claude Code’s agentic capabilities to Claude Desktop for knowledge work beyond coding (see sidebar for more details). OpenAI launched [Frontier](#), a new enterprise platform enabling users to build, deploy, and manage AI agents on Feb 5, 2026. Frontier gives agents the same skills people may need to succeed in a work environment: shared context, onboarding, hands on learning with feedback, and clear permissions. Given the pace of product velocity among the leading AI labs, continued deployment of tools/resources in support of adoption will likely be prioritized.

What is Anthropic’s Claude Cowork?

Launched on January 12, 2026, [Claude Cowork](#) is an **agentic productivity tool** that extends Claude Code’s capabilities beyond software development to **general workplace tasks**. Cowork allows users to **grant Claude access to tools** (e.g., local folders, browser tabs, enterprise connectors), enabling the agent to perform multi-step tasks autonomously—without users needing to repeat context or manually reformat outputs.

Cowork leverages the same core agentic architecture as Claude Code with **two adjustments**:

- 1) An accessible interface** non-technical professionals can more easily use (vs. Claude Code’s terminal integration).
- 2) Broader integrations and context** enabling access to enterprise data/workflows beyond coding environments.

Cowork is currently **available as a research preview for paid plans** (Pro, Max, Team, Enterprise) on Claude desktop for macOS and Windows.

A library of **plugins (10 currently)** is also available in Cowork to help users with “*common knowledge work functions*”: productivity, enterprise search, sales, finance, data, legal, marketing, customer support, product management, and biology research.

Figure 21: Claude Cowork

Source: Company website

Enterprise adoption bolstering top-line of leading private modelmakers. The increase in adoption of AI models and agents across enterprises is evident in higher revenue run rates of leading private frontier labs, with **Anthropic now at ~\$11bn enterprise ARR and OpenAI reaching ~\$8bn enterprise ARR towards the end of Dec-25.**

Figure 22: Battle for Enterprise Spend Escalates

USD in billions

Source: Company websites and statements, World Economic Forum, J.P. Morgan

Anthropic has established itself as the leading enterprise-first contender, with **80% of its revenue** deriving from enterprise customers. In an interview at the World Economic Forum, CEO Dario Amodei highlighted the startup's remarkable growth journey: ARR progression from roughly \$0-\$100 million (2023), to \$100 million-\$1 billion (2024), to \$1-\$10 billion (2025), with expectations of **\$20-\$26 billion in 2026**—positioning Anthropic as one of the fastest-growing tech companies globally. Most recently, the company noted in mid-February alongside its announcement of a **\$30bn fundraise at a \$380bn post-money valuation that it had reached \$14bn ARR.**

Five key factors appear to underpin Anthropic's enterprise success to date: **1) AI safety focus** that has built trust with enterprise customers; **2) models optimized for core productivity** workloads; **3) beneficiary of diversification** as enterprises seek to reduce single-provider dependency; **4) strategic partnerships across all major cloud platforms** (AWS, Azure, GCP)—uniquely, Anthropic is the only US model provider with best-in-class models available on all three; and **5) Claude Code's market leadership**, driving **\$2.5 billion ARR (Feb-26)** and widespread adoption (e.g., our channel checks suggest it has become an essential component of the tech stack for several startups), cementing Anthropic's position as a leading vendor for AI development tools.

Meanwhile, OpenAI is rapidly pivoting toward a balanced consumer-enterprise model, viewing these markets as symbiotic. In a recent CNBC interview (Jan-26) at the World Economic Forum, CFO Sarah Friar disclosed that the company's revenue split has shifted from 70%/30% consumer/enterprise (~Jan-25) to 60%/40%, with the expectation that they end the year closer to **~50%/50%**. Additionally, CEO Sam Altman tweeted on January 22 that **OpenAI added \$1 billion in ARR from its API business alone in the past month.** This strategic enterprise focus appears prudent given the significant market opportunity, with success in winning share likely to hinge on four factors: **1) scaling agentic capabilities beyond coding** to broader productivity use cases; **2) diversifying cloud access** beyond Azure to make frontier models more widely available to enterprises (note Satya Nadella stated in Nov-25 that OpenAI's API business is exclusive to Azure as part of the Microsoft agreement, with a few exceptions, e.g., the U.S. government); **3) expanding partnerships** with leading enterprise platforms and consulting firms; and **4) go-to-market expansion**, including domain-specific strategies (e.g., healthcare) and international markets.

As enterprises increasingly adopt multi-model strategies—often deploying 2-3 general-purpose LLMs—the **bulk of value** from rising AI spend, deeper platform integration, and data capture will eventually **accrue to the primary model provider** that can deliver cutting-edge agentic capabilities and tools that drive tangible ROI.

Although the pace of progression from experimentation to pilots to scaled deployment could vary materially by industry, we expect **success to favor providers that can best simplify deployment, build trust at scale, and a defensible moat at the frontier.**

“Even if the underlying technology is capable of doing most human labor... there are places where the adoption of AI will take years. That's why my prediction for 50% of entry level white collar jobs being disrupted is 1-5 years, even though I suspect we'll have powerful AI (...enough to do most or all jobs, not just entry level) in much less than 5 years.”

- Dario Amodei, “The Adolescence of Technology,” Jan 2026

Appendix

U.S. Consumer Proprietary Survey - Details & Demographics

Our survey of **2,524 consumers** was conducted between Jan 21 and 26, 2026, across a **range of respondents intended to broadly reflect the U.S. adult population**. All respondents were located in the United States, above the age of 18, and had heard of AI services (e.g., ChatGPT, Gemini) before, even if they had not directly tried these services.

Below we share a breakdown of the 2,524 respondents in our survey by **educational background, gender, income, and age**. As noted, while age and gender were broadly representative of the U.S. population, our survey sample was skewed toward respondents with lower incomes and lower levels of educational attainment.

Morgan recommendations, ratings, or estimates available for any of the private companies referenced herein. While the information in this material has been obtained from sources believed to be reliable, private companies are not typically subject to reporting obligations, resulting in less publicly available information and fewer sources of information regarding these companies. The information contained in this material may differ from information a private company may subsequently make public or otherwise share with investors, and we take no responsibility for any such discrepancies. Additionally, you should not assume that J.P. Morgan will continue coverage of a private company if it goes public, as any such decision would be made in accordance with J.P. Morgan policies.

History of Investment Recommendations:

A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of <http://www.jpmmarkets.com> where you can also search by analyst name, sector or financial instrument.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Registration of non-US Analysts: Unless otherwise noted, the non-US analysts listed on the front of this report are employees of non-US affiliates of J.P. Morgan Securities LLC, may not be registered as research analysts under FINRA rules, may not be associated persons of J.P. Morgan Securities LLC, and may not be subject to FINRA Rule 2241 or 2242 restrictions on communications with covered companies, public appearances, and trading securities held by a research analyst account.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to [UK MIFID Research Unbundling exemption](#) for details of J.P.

Morgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

All research material made available to clients are simultaneously available on our client website, J.P. Morgan Markets, unless specifically permitted by relevant laws. Not all research content is redistributed, e-mailed or made available to third-party aggregators. For all research material available on a particular stock, please contact your sales representative.

Any long form nomenclature for references to China; Hong Kong; Taiwan; and Macau within this research material are Mainland China; Hong Kong SAR (China); Taiwan (China); and Macau SAR (China).

J.P. Morgan Research may, from time to time, write on issuers or securities targeted by economic or financial sanctions imposed or administered by the governmental authorities of the U.S., EU, UK or other relevant jurisdictions (Sanctioned Securities). Nothing in this report is intended to be read or construed as encouraging, facilitating, promoting or otherwise approving investment or dealing in such Sanctioned Securities. Clients should be aware of their own legal and compliance obligations when making investment decisions.

Any digital or crypto assets discussed in this research report are subject to a rapidly changing regulatory landscape. For relevant regulatory advisories on crypto assets, including bitcoin and ether, please see <https://www.jpmorgan.com/disclosures/cryptoasset-disclosure>.

The author(s) of this research report may not be licensed to carry on regulated activities in your jurisdiction and, if not licensed, do not hold themselves out as being able to do so.

Exchange-Traded Funds (ETFs): J.P. Morgan Securities LLC ("JPMS") acts as authorized participant for substantially all U.S.-listed ETFs. To the extent that any ETFs are mentioned in this report, JPMS may earn commissions and transaction-based compensation in connection with the distribution of those ETF shares and may earn fees for performing other trade-related services, such as securities lending to short sellers of the ETF shares. JPMS may also perform services for the ETFs themselves, including acting as a broker or dealer to the ETFs. In addition, affiliates of JPMS may perform services for the ETFs, including trust, custodial, administration, lending, index calculation and/or maintenance and other services.

Options and Futures related research: If the information contained herein regards options- or futures-related research, such information is available only to persons who have received the proper options or futures risk disclosure documents. Please contact your J.P. Morgan Representative or visit <https://www.theocc.com/components/docs/riskstoc.pdf> for a copy of the Option Clearing Corporation's Characteristics and Risks of Standardized Options or https://www.finra.org/sites/default/files/2020-08/Security_Futures_Risk_Disclosure_Statement_2020.pdf for a copy of the Security Futures Risk Disclosure Statement.

Changes to Interbank Offered Rates (IBORs) and other benchmark rates: Certain interest rate benchmarks are, or may in the future become, subject to ongoing international, national and other regulatory guidance, reform and proposals for reform. For more information, please consult: https://www.jpmorgan.com/global/disclosures/interbank_offered_rates

Private Bank Clients: Where you are receiving research as a client of the private banking businesses offered by JPMorgan Chase & Co. and its subsidiaries ("J.P. Morgan Private Bank"), research is provided to you by J.P. Morgan Private Bank and not by any other division of J.P. Morgan, including, but not limited to, the J.P. Morgan Corporate and Investment Bank and its Global Research division.

Legal entity responsible for the production and distribution of research: The legal entity identified below the name of the Reg AC Research Analyst who authored this material is the legal entity responsible for the production of this research. Where multiple Reg AC Research Analysts authored this material with different legal entities identified below their names, these legal entities are jointly responsible for the production of this research. Where more than one legal entity is listed under an analyst's name, the first legal entity is responsible for the production unless stated otherwise. Research Analysts from various J.P. Morgan affiliates may have contributed to the production of this material but may not be licensed to carry out regulated activities in your jurisdiction (and do not hold themselves out as being able to do so). Unless otherwise stated below in the legal entity disclosures, this material has been distributed by the legal entity responsible for production, or where more than one legal entity is listed under the analyst's name, the first legal entity will be responsible for distribution. If you have any queries, please contact the relevant Research Analyst in your jurisdiction or the entity in your jurisdiction that has distributed this research material.

General: Additional information is available upon request. The information in this material has been obtained from sources believed to be reliable. While all reasonable care has been taken to ensure that the facts stated in this material are accurate and that the forecasts, opinions and expectations contained herein are fair and reasonable, JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) make no representations or warranties whatsoever to the completeness or accuracy of the material provided, except with respect to any disclosures relative to J.P. Morgan and the Research Analyst's involvement with the issuer that is the subject of the material. Accordingly, no reliance should be placed on the accuracy, fairness or completeness of the information contained in this material. There may be certain discrepancies with data and/or limited content in this material as a result of calculations, adjustments, translations to different languages, and/or local regulatory restrictions, as applicable. These discrepancies should not impact the overall investment analysis, views and/or recommendations of the subject company(ies) that may be discussed in the material. Artificial intelligence tools may have been used in the preparation of this material, including assisting in data analysis, pattern recognition, and content drafting for research material. J.P. Morgan accepts no liability whatsoever for any loss arising from any use of this material or its contents, and neither J.P. Morgan nor any of its respective directors, officers or employees, shall be in any way responsible for the contents hereof, apart from the liabilities and responsibilities that may be imposed on them by the relevant regulatory authority in the jurisdiction in question, or the regulatory regime thereunder. Opinions, forecasts or projections contained in this material represent J.P. Morgan's current opinions or judgment as of the date of the material only and are therefore subject to change without notice. Periodic updates may be provided on companies/industries based on company-specific developments or announcements, market conditions or any other publicly available information. There can be no assurance that future results or events will be consistent with any such opinions, forecasts or projections, which represent only one possible outcome. Furthermore, such opinions, forecasts or projections are subject to certain risks, uncertainties and assumptions that have not been verified, and future actual results or events could differ materially. The value

of, or income from, any investments referred to in this material may fluctuate and/or be affected by changes in exchange rates. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Past performance is not indicative of future results. Accordingly, investors may receive back less than originally invested. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. This material may include views on structured securities, options, futures and other derivatives. These are complex instruments, may involve a high degree of risk and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. The recipients of this material must make their own independent decisions regarding any securities or financial instruments mentioned herein and should seek advice from such independent financial, legal, tax or other adviser as they deem necessary. J.P. Morgan may trade as a principal on the basis of the Research Analysts' views and research, and it may also engage in transactions for its own account or for its clients' accounts in a manner inconsistent with the views taken in this material, and J.P. Morgan is under no obligation to ensure that such other communication is brought to the attention of any recipient of this material. Others within J.P. Morgan, including Strategists, Sales staff and other Research Analysts, may take views that are inconsistent with those taken in this material. Employees of J.P. Morgan not involved in the preparation of this material may have investments in the securities (or derivatives of such securities) mentioned in this material and may trade them in ways different from those discussed in this material. This material is not an advertisement for or marketing of any issuer, its products or services, or its securities in any jurisdiction.

Confidentiality and Security Notice: This transmission may contain information that is privileged, confidential, legally privileged, and/or exempt from disclosure under applicable law.
